

Tutorial 1

Basic Java Programming Task

A. Hello World Program

```
public class Main {  
    public static void main(String[] args) {  
        System.out.println("Hello, Java World!");  
    }  
}
```

B. Variable & Data Types

```
public class DataTypes Demo {  
    public static void main (String[] args) {  
        int age = 20;  
        double salary = 25900.50;  
        boolean isStudent = true;  
        char grade = 'A';  
        String name = "Pratik";  
        System.out.println("Integer value:" + age);  
        System.out.println("Double value:" + salary);  
        System.out.println("Boolean value:" + isStudent);  
        System.out.println("Char value:" + grade);  
        System.out.println("String value:" + name);  
    }  
}
```

C) Operators Program

```
public class OperatorsDemo {
    public static void main (String [] args) {
        int a = 10;
        int b = 5;

        // Arithmetic Operators
        System.out.println ("Addition: " + (a + b));
        System.out.println ("Subtraction: " + (a - b));
        System.out.println ("Multiplication: " + (a * b));
        System.out.println ("Division: " + (a / b));
        System.out.println ("Modulus: " + (a % b));

        // Relational Operators
        System.out.println ("a > b: " + (a > b));
        System.out.println ("a < b: " + (a < b));
        System.out.println ("a == b: " + (a == b));
        System.out.println ("a != b: " + (a != b));

        // Logical Operators
        boolean x = true;
        boolean y = false;
        System.out.println ("x & y: " + (x & y));
        System.out.println ("x || y: " + (x || y));
        System.out.println ("! x: " + (! x));
    }
}
```

D. User Input Sum

```
import java.util.Scanner;
```

```
public class UserInputSum {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);
```

```
        System.out.println("Enter first number:");  
        int num1 = sc.nextInt();
```

```
        System.out.println("Enter second number:");  
        int num2 = sc.nextInt();
```

```
        int sum = num1 + num2;
```

```
        System.out.println("Sum: " + sum);  
        sc.close();
```

```
    }  
}
```
