

Hello World Program

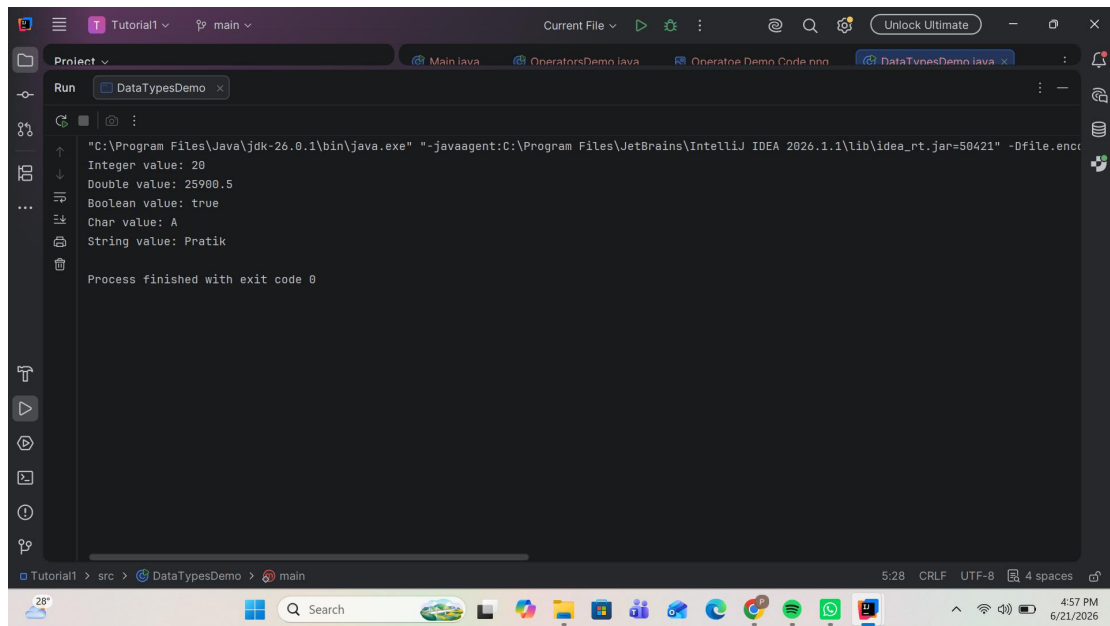

2. Variable and Data Types

B. Variable & Data Types

```
public class DataTypesDemo {  
    public static void main (String[] args) {  
  
        int age = 20;  
        double salary = 25900.50;  
        boolean isStudent = true;  
        char grade = 'A';  
        String name = "Pratik";  
        System.out.println("Integer value: " + age);  
        System.out.println("Double value: " + salary);  
        System.out.println("Boolean value: " + isStudent);  
        System.out.println("Char value: " + grade);  
        System.out.println("String value: " + name);  
    }  
}
```

3. Operators Program

C) Operators Program

```
public class Operators Demo {
    public static void main (String[] args) {
        int a = 10;
        int b = 5;

        // Arithmetic Operators
        System.out.println ("Addition: " + (a+b));
        System.out.println ("Subtraction: " + (a-b));
        System.out.println ("Multiplication: " + (a*b));
        System.out.println ("Division: " + (a/b));
        System.out.println ("Modulus: " + (a%b));

        // Relational Operators
        System.out.println ("a > b: " + (a > b));
        System.out.println ("a < b: " + (a < b));
        System.out.println ("a == b: " + (a == b));
        System.out.println ("a != b: " + (a != b));

        // Logical Operators
        boolean x = true;
        boolean y = false;
        System.out.println ("x & y: " + (x & y));
        System.out.println ("x || y: " + (x || y));
        System.out.println ("! x: " + (!x));
    }
}
```

The screenshot displays the IntelliJ IDEA IDE interface. The top pane shows the source code for `OperatorsDemo.java`. The code defines a `main` method that performs various arithmetic, relational, and logical operations on variables `a` and `b`, and logical variables `x` and `y`.

```
1 public class OperatorsDemo {
2     public static void main(String[] args) {
3         int a = 10;
4         int b = 5;
5         // Arithmetic Operators
6         System.out.println("Addition: " + (a + b));
7         System.out.println("Subtraction: " + (a - b));
8         System.out.println("Multiplication: " + (a * b));
9         System.out.println("Division: " + (a / b));
10        System.out.println("Modulus: " + (a % b));
11        // Relational Operators
12        System.out.println("a > b: " + (a > b));
13        System.out.println("a < b: " + (a < b));
14        System.out.println("a == b: " + (a == b));
15        System.out.println("a != b: " + (a != b));
16        // Logical Operators
17        boolean x = true;
18        boolean y = false;
19        System.out.println("x && y: " + (x && y));
20        System.out.println("x || y: " + (x || y));
21        System.out.println("!x: " + (!x));
22    }
23 }
24
```

The bottom pane shows the output of the program execution:

```
Run
"C:\Program Files\Java\jdk-26.0.1\bin\java.exe" "-javaagent:C:\Program Files\JetBrains\IntelliJ IDEA 2026.1.1\lib\idea_rt.jar=50409" -Dfile.encoding=UTF-8
Addition: 15
Subtraction: 5
Multiplication: 50
Division: 2
Modulus: 0
a > b: true
a < b: false
a == b: false
a != b: true
x && y: false
x || y: true
!x: false

Process finished with exit code 0
```

4. User Input Sum

D. User Input Sum

```
import java.util.Scanner;
```

```
public class UserInputSum {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);
```

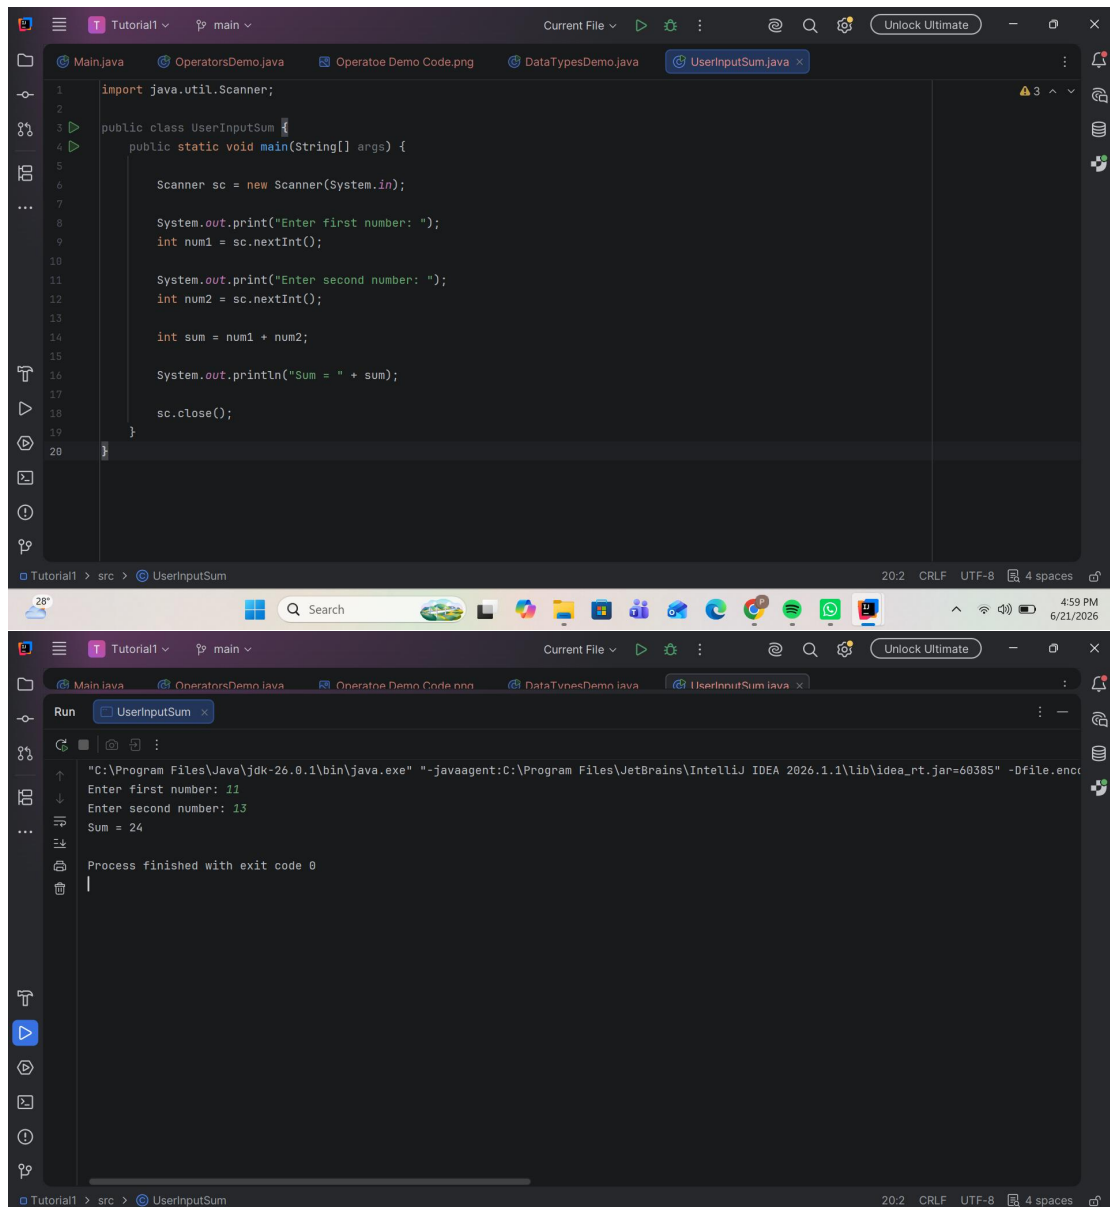

```
        System.out.println("Enter first number:");  
        int num1 = sc.nextInt();
```

```
        System.out.println("Enter second number:");  
        int num2 = sc.nextInt();
```

```
        int sum = int num1 + num2;
```

```
        System.out.println("Sum = " + sum);    sc.close();
```

```
    }  
}
```

CERTIFICATE OF COMPLETION

Pratik Dhungel

has successfully completed the online course:
Git Training

This professional has demonstrated initiative and a
commitment to deepening their skills and advancing
their career. Well done!
